# Fatal Work Injuries in Virginia — 2015

Fatal work injuries totaled 106 in 2015 for Virginia, the U.S. Bureau of Labor Statistics reported today. Sheila Watkins, the Bureau's regional commissioner, noted that the number of work-related fatalities in Virginia decreased by 10 from the previous year and was the lowest level on record. Fatal occupational injuries in the state have ranged from a high of 186 in 2005 to a low of 106 in 2015. (See chart 1.)

Nationwide, a total of 4,836 fatal work injuries were recorded in 2015, a slight increase from the 4,821 fatal injuries in 2014, according to the results from the Census of Fatal Occupational Injuries (CFOI) program.

Chart 1. Total fatal occupational injuries, Virginia, 2006-2015

SOURCE: U.S. Bureau of Labor Statistics.

## Type of incident

In Virginia, transportation incidents resulted in 36 fatal work injuries while falls, trips, or slips and contact with objects and equipment each accounted for 20 fatalities. These three major categories accounted for 72 percent of all workplace fatalities in the state. (See table 1.) The number of worker deaths from transportation incidents decreased from 52 over the year while worker fatalities due to falls, trips, or slips and contact with objects and equipment both increased slightly.

Exposure to harmful substances or environments was the fourth-most frequent fatal work event with 15 fatalities, more than double the count for 2014, followed by violence and other injures by persons or animals with 13. Seven of the exposure to harmful substances or environments fatalities were the result of unintentional overdoses at work, while homicides and suicides each accounted for six of the deaths within violence and other injures by persons or animals. Nationally, transportation incidents was the most frequent fatal workplace event in 2015, accounting for approximately 42 percent of fatal work injuries. (See chart 2.) Falls, slips, or trips was the second-most frequent type of event, with 17 percent of work-related fatalities, followed by contact with objects and equipment (15 percent) and violence and other injuries by persons or animals (15 percent).

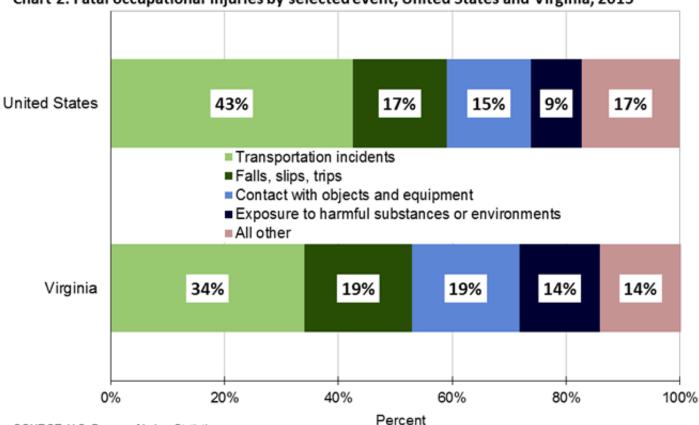

Chart 2. Fatal occupational injuries by selected event, United States and Virginia, 2015

## **Industry**

SOURCE: U.S. Bureau of Labor Statistics.

The private construction industry sector had the largest number of fatalities in Virginia with 25. (See table 2.) Falls, slips, or trips was the most frequent fatal event in the construction sector with 12 worker deaths, followed by exposure to harmful substances or environments with 7 fatalities. Sixty-eight percent of those fatally injured in this sector worked in specialty trade contracting.

The private transportation and warehousing sector had 18 workplace fatalities, lower than count in the previous year (25 worker deaths). Long-distance general freight trucking accounted for half of the fatal injuries in this industry.

# Occupation

Transportation and material moving occupations and construction and extraction occupations had the highest number of workplace fatalities with 29 and 20, respectively. (See table 3.) The majority of the fatalities within the transportation and material moving group were heavy and tractor-trailer truck drivers, with 22 worker deaths. Construction trades workers accounted for 17 of the 20 fatalities among construction and extraction workers.

#### **Contracted Workers**

A contracted worker is defined as a worker employed by one firm but working at the behest of another firm that exercises overall responsibility for the operations at the site of the fatal injury. In 2015, Virginia had 13 fatally-injured workers identified as fitting the contracted worker criteria; of those, 5 were the result of falls to a lower level and 3 were the result of exposure to electricity.

# Additional highlights:

- Men accounted for 92 percent of the work-related fatalities in Virginia, similar to the 93-percent national share. (See table 4.) Transportation incidents made up 34 percent of the fatalities for men in Virginia.
- White, non-Hispanic workers accounted for 74 percent of those who died from a workplace injury. Nationwide, this group accounted for 67 percent of work-related deaths.
- Workers 25-54 years old accounted for 58 percent of the state's work-related fatalities in 2015, similar to the national share of 57 percent.
- Of the 106 fatally-injured workers in Virginia, 76 percent worked for wages and salaries; the remainder were self-employed. The most frequent fatal event for both groups of workers was transportation incidents.

# Change in the Census of Fatal Occupational Injuries (CFOI) News Release Schedule

Beginning with the 2015 reference year, CFOI will publish a single, annual release with no revisions. A similar schedule will be followed in subsequent years. Preliminary releases, which normally appeared in August or September in past years, will no longer be produced.

## **Technical Note**

**Background of the program.** The Census of Fatal Occupational Injuries (CFOI), part of the BLS Occupational Safety and Health Statistics (OSHS) program, compiles a count of all fatal work injuries occurring in the U.S. during the calendar year. The CFOI program uses diverse state, federal, and independent data sources to identify, verify, and describe fatal work injuries. This ensures counts are as complete and accurate as possible. For the 2015 data, over 21,400 unique source documents were reviewed as part of the data collection process. For technical information and definitions for CFOI, please go to the BLS Handbook of Methods on the BLS web site at www.bls.gov/opub/hom/pdf/homch9.pdf.

**Federal/State agency coverage.** The Census of Fatal Occupational Injuries includes data for all fatal work injuries, whether the decedent was working in a job covered by the Occupational Safety and Health Administration (OSHA) or other federal or state agencies or was outside the scope of regulatory coverage. Thus, any comparison between the BLS fatality census counts and those released by other agencies should take into account the different coverage requirements and definitions being used by each agency.

**Acknowledgments.** BLS thanks the Virginia Department of Labor and Industry for their efforts in collecting accurate, comprehensive, and useful data on fatal work injuries. BLS also appreciates the efforts of all federal, state, local, and private sector entities that provided source documents used to identify fatal work injuries. Among these agencies are the Occupational Safety and Health Administration; the National

Transportation Safety Board; the U.S. Coast Guard; the Mine Safety and Health Administration; the Office of Workers' Compensation Programs (Federal Employees' Compensation and Longshore and Harbor Workers' Compensation divisions); the Federal Railroad Administration; the National Highway Traffic Safety Administration; state vital statistics registrars, coroners, and medical examiners; state departments of health, labor, and industrial relations and workers' compensation agencies; state and local police departments; and state farm bureaus.

Information in this release is available to sensory-impaired individuals. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

Table 1. Fatal occupational injuries by event or exposure, Virginia, 2014-15

Event or exposure (1)	2014	2015	
	Number	Number	Percent
otal		106	10

Struck by discharged or flying object		1	
Struck by dislodged flying object, particle	I I	1	
Injured by handheld object or equipment	I I	2	
Injured by slipping or swinging object held by injured worker		2	
Caught in or compressed by equipment or objects	4	3	
Caught in running equipment or machinery	4	3	
Caught in running equipment or machinery during regular operation		3	
Struck, caught, or crushed in collapsing structure, equipment, or material	-	1	
Engulfment in other collapsing material	I I	1	

#### Footnotes:

(1) Based on the BLS Occupational Injury and Illness Classification System (OIICS) 2.01 implemented for 2011 data forward.

Note: Data for all years are revised and final. Totals for major categories may include subcategories not shown separately. Percentages may not add to totals because of rounding. CFOI fatal injury counts exclude illness-related deaths unless precipitated by an injury event. Dashes indicate no data reported or data that do not meet publication criteria.

#### Footnotes

Note: Data for all years are revised and final. Totals for major categories may include subcategories not shown separately. Percentages may not add to totals because of rounding. CFOI fatal injury counts exclude illness-related deaths unless precipitated by an injury event. Dashes indicate no data reported or data that do not meet publication criteria.

<sup>(1)</sup> Industry data are based on the North American Industry Classification System, 2012.

<sup>(2)</sup> Includes fatal injuries at all establishments categorized as Mining, quarrying, and oil and gas extraction (Sector 21) in the North American Industry Classification System, including establishments not governed by the Mine Safety and Health Administration (MSHA) rules and reporting, such as those in Oil and Gas Extraction.

<sup>(3)</sup> Includes fatal injuries to workers employed by governmental organizations regardless of industry.
